Miranda Controls IPTV

MARCH 01, 2006

[Discuss >](#)

MONTREAL -- Miranda will be showing its iControl end-to-end facility monitoring and control system at its first appearance at IPTV World Forum, Olympia, London (March 6-8).

A world leader in monitoring and control systems for television service providers and broadcasters, Miranda has pioneered "monitoring by exception" (MBE) to offer more efficient control in large multichannel facilities. With MBE operators can focus their attention on television channels with alarm conditions using a highly adapted investigation window.

iControl uses customized graphical representations of one or more facilities to create a highly intuitive control environment with harmonized signal and device monitoring. It's based on industry-standard SNMP protocols to allow effective monitoring and control of the video infrastructure, as well as the networking and building systems.
